

**COMMUNICATIONS** division will soon start erecting antennas for new, very high frequency police and fire radio system. There will be 16 of them, replacing one lone tower now (at Station X in Eden Park). Three are to be on park property, two on city playgrounds, seven on firehouses, and four on Waterworks towers. Multiple antennas will eliminate "dead spots" in present system (worst dead spot: Along River road in Riverside, Saylor Park). Eight of the new antennas will be on 150-foot towers, two on 100-foot towers, and the rest on top of existing buildings.
